

Dinosaur Discovery

Name: _____ Date: _____

A long time ago, dinosaurs roamed the Earth. They were big and small, some had long necks, and others had sharp teeth. Scientists called paleontologists find dinosaur bones in the ground. They dig carefully to uncover these ancient treasures. When they find a bone, they study it to learn more about how dinosaurs lived. Some dinosaurs were plant eaters, while others were meat eaters. Each discovery helps us understand these amazing creatures better!

Read the passage and answer the questions below.

1. What do scientists who study dinosaurs called?

2. What do paleontologists find in the ground?

3. Were all dinosaurs the same?

4. What did some dinosaurs eat?

Answer Key

1. What do scientists who study dinosaurs called? — **Paleontologists**
2. What do paleontologists find in the ground? — **Dinosaur bones**
3. Were all dinosaurs the same? — **No, some were big and some were small.**
4. What did some dinosaurs eat? — **Plants or meat**
